EDUCATION

B.S. Computer Science

Arizona State University, Tempe, AZ

August 2022 - July 2026

TECHNICAL SKILLS

Languages: TypeScript, Python, C#, SQL, React, Next.js, HTML, CSS, Flask, REST APIs. **Databases & Data:** PostgreSQL, MySQL, SQL queries. **Testing & DevOps:** JUnit, pytest, Maven, GitHub Actions, CI/CD, Docker, AWS. **Tools & Platforms:** Git, GitHub, OpenAI API

CERTIFICATIONS & TRAINING

AI Fluency: Framework & Foundations – Anthropic, July 2026

Credential ID: ks6n2fvpjiru

AWS Cloud Practitioner Essentials – Amazon Web Services Training and Certification, July 2026

WORK EXPERIENCE

Full-Stack Developer | Collegiate AI Platform, Endless Moments LLC

August 2025 - April 2026

- Built production full-stack features for an AI-powered college and career planning platform using TypeScript, React, Python, Flask APIs, Supabase, REST APIs, and SQL-backed application logic.
- Collaborated in an Agile team of four to translate client requirements into scoped features, debug cross-layer issues, and support production-style delivery.
- Implemented secure account-management workflows including delete account, password reset, and email-change features across frontend, backend, and Supabase authentication.
- Improved reliability and usability by resolving Supabase RLS issues, configuring Brevo SMTP, migrating legacy data with Docker, integrating College Scorecard API filters, and deploying frontend updates through Vercel.

AI Product Strategy Intern | ADJOAA

March 2026 - May 2026

- Structured and normalized product data across 25,000+ SKUs and 110+ brands, improving metadata consistency, keyword mapping, search visibility, AI-readability, and catalog scalability.
- Designed AI-assisted automation workflows using Claude, Shopify, Airtable, and structured prompt libraries to generate SEO-ready product descriptions, metadata, and scalable content workflows.
- Analyzed traffic, conversion, retention, search, product catalog, and competitor data across UK, US, and French markets to identify growth bottlenecks and optimization opportunities.

PROJECTS

Graph Search Engine & Software Testing Framework | Java, Maven, JUnit, GitHub Actions

March 2026

- Built a Java graph management system to parse DOT files, create directed graph objects, add/remove nodes and edges, and export graphs to DOT/PNG formats.
- Implemented BFS, DFS, and Random Walk algorithms through a shared GraphSearch API with enum-based algorithm selection.
- Refactored traversal logic using Template Method and Strategy design patterns and added JUnit test coverage with GitHub Actions CI validation.

Project Management Database System | MySQL, ER Modeling, Relational Design

Spring 2026

- Designed a normalized relational database schema for project, employee, manager, billing, timesheet, report, and bug-tracking workflows.
- Modeled business data requirements using ER diagrams, relational schemas, referential integrity, functional dependencies, normalization, and SQL reporting needs.

ASP.NET Service-Oriented Personal Dashboard Application | C#, ASP.NET Core, SQL Server

Fall 2025

- Designed and developed a service-oriented ASP.NET Core web application with secure authentication, role-based access control, session management, password hashing, and SQL Server data persistence.
- Implemented backend services for event management, structured data retrieval, and external public API integrations within a modular architecture.
- Applied backend development, authorization, database design, debugging, and service-oriented architecture principles across the software lifecycle.

AI-Assisted Debugging & Testing Project | Python, Streamlit, pytest, Git

June 2026

- Evaluated an AI-generated Python/Streamlit application with logic, scoring, input-handling, and end-game issues, using manual testing to identify reproducible defects.
- Refactored core game logic into reusable utility functions, improved separation of concerns, and added pytest test coverage to verify corrected behavior.
- Practiced responsible AI-assisted development by reviewing AI-generated code, validating suggested fixes, correcting hallucinated logic, and documenting debugging decisions.

AWARDS, HACKATHONS & COMPETITIONS

- 3rd Place, ScaleU + Principled Innovation Academy Hackathon 2026** – Built Evexia, a healthcare data transparency platform focused on informed consent, patient-visible access logs, emergency access workflows, and ethical health data use.
- Honorable Mention, ACEL 2026 Case Competition** – Recognized by Sterling Systems for emotional intelligence, team collaboration, communication, and stakeholder-centered thinking.
