SUMMARY

Recent Computer Science graduate with full-stack experience building user-focused software using React, TypeScript, Python, and Flask. Experienced in translating client and user needs into practical features through a creative, product-minded approach, with hands-on work in API integration, authentication workflows, and automated testing.

EDUCATION

B.S. Computer Science, Cum Laude July 2026
Arizona State University, Tempe, AZ 3.40 GPA

TECHNICAL SKILLS

Languages: TypeScript, Python, Java, SQL | **Frontend:** React, Next.js, HTML/CSS | **Backend & Data:** Flask, REST APIs, PostgreSQL, MySQL | **Testing & DevOps:** pytest, JUnit, Maven, GitHub Actions, Docker, Git | **AI & Deployment:** OpenAI API, Anthropic API, Vercel

TECHNICAL EXPERIENCE

Full-Stack Developer | Collegiate AI Platform, ASU- Sponsored Capstone Aug 2025 - Apr 2026

- Built three end-to-end self-service account workflows—account deletion, password reset, and email change—across React, TypeScript, Flask, and Supabase authentication.
- Implemented a server-side account-deletion flow that worked within Supabase Row Level Security constraints and configured Brevo SMTP to support secure email-change verification.
- Reworked the College Scorecard API integration to replace a hard-coded 20-result fetch with API-driven pagination and filtering, enabling users to search all matching colleges while displaying 20 results per page.

AI Product Strategy Intern | ADJOAA

Mar - May 2026

- Analyzed six months of Shopify traffic, conversion, retention, search, revenue, and catalog data to develop a 90-day roadmap of 20 prioritized automation, data, and platform initiatives.
- Built Python scripts to scrape partner-company data and validate URLs in a manually maintained directory, separating active and broken websites into structured datasets.

PROJECTS

PawPal+ – Pet Care Scheduling & Task Management System | Python, Streamlit, pytest July 2026

- Designed a UML-based Python architecture using Owner, Pet, Task, and Scheduler classes, separating business logic from the Streamlit UI and implementing recurring tasks, sorting, filtering, conflict detection, and daily schedule generation.
- Developed 81 pytest tests with reusable fixtures to validate core workflows and edge cases, including overnight schedules, month-end recurrence, invalid identifiers, overlapping tasks, and sorting behavior.

Mindows 2005 – Interactive Windows XP-Inspired Portfolio | React, TypeScript, Vite, CSS

July 2026

- Designed and built a Windows XP-inspired portfolio that transforms traditional project, experience, and contact pages into an interactive desktop environment with four themed web applications.
- Designed reusable React and TypeScript components for draggable icons, layered windows, boot flows, terminal commands, persistent settings, responsive layouts, and keyboard- and touch-controlled interactions.

Java Graph Search Engine | Java, Maven, JUnit, GitHub Actions

Mar 2026

- Built a Java directed-graph system that parses DOT files, manages nodes and edges, exports graphs to DOT/PNG formats, and executes BFS, DFS, and random walk through a shared search API.
- Refactored traversal logic across nine core classes using Template Method and Strategy patterns, then added 18 JUnit tests and a GitHub Actions pipeline that installed Graphviz and ran Maven builds on every push.

ADDITIONAL EXPERIENCE & TRAINING

Outreach + Social Media Specialist | Arizona State University | Mar 2023 - Dec 2025

- Managed Instagram content for approximately 1,800 followers, with reels consistently reaching 2,000–3,000 views, and collaborated with multiple campus organizations to promote events.

3rd Place, ScaleU + Principled Innovation Academy Hackathon 2026

- Defined the product direction for Evexia, a healthcare data-transparency platform, and collaborated on API requirements, feature prioritization, and system architecture.

Certifications and Training

- Completed:** Anthropic AI Fluency: Framework & Foundations, July 2026 | AWS Cloud Practitioner Essentials, July 2026
- In Progress:** CodePath AI110: Foundations of AI Engineering, Summer 2026 | Anthropic Building with the Claude API, 2026
