SUMMARY

Computer Science senior and product-minded developer with a creative, user-centered approach to solving real problems. Comfortable identifying underlying user needs and shaping ambiguous ideas into thoughtful, testable software. Seeking an early-career product or full-stack engineering role where I can contribute throughout the product lifecycle and build software that creates meaningful change.

EDUCATION

B.S. Computer Science, Cum Laude
Arizona State University, Tempe, AZ

Graduating Aug 2026
3.40 GPA

TECHNICAL SKILLS

Development: TypeScript, Python, Java, SQL, React, Flask, REST APIs, PostgreSQL, MySQL

Testing, AI & Deployment: pytest, JUnit, Maven, Docker, Git, OpenAI API, Anthropic API, AWS (S3, CloudFront)

Certifications & Training: Anthropic AI Fluency; AWS Cloud Essentials | **In Progress:** CodePath AI110; Building with the Claude API

TECHNICAL EXPERIENCE

Full-Stack Developer | Collegiate AI Platform, ASU- Sponsored Capstone

Aug 2025 - May 2026

Endless Moments LLC | Four-person Agile team

- Built three end-to-end account workflows – account-deletion, password-reset, and email-change; improved US college discovery with state filtering and API-driven pagination and simplified the student-facing UI.
- Served as Scrum Master for Sprints 2, 7, and 10, maintaining technical documentation and a shared bug tracker, coordinating team priorities, and communicating technical risks and scope tradeoffs to the client; supported platform migration and deployed the frontend to Vercel using the sponsor's Porkbun domain and DNS.

AI Product Strategy Intern | ADJOAA

Mar - May 2026

London-based company | Remote, seven-week internship

- Analyzed six months of Shopify data reports and built Python scripts to validate partners' websites/catalog approx 80–100 URLs, using the findings to identify business trends, visibility gaps, and opportunities for reaching new audiences.
- Developed a 90-day roadmap of 20 prioritized initiatives while collaborating with five interns across different departments and countries, tailoring recommendations to their areas of focus while maintaining a cohesive product strategy.

PROJECTS

PawPal+ – Pet Care Schedule & Task Management System | Python, Streamlit, pytest (Codepath)

July 2026

- Expanded a basic task tracker into a conflict-aware scheduling system by adding recurring-task generation, multi-pet filtering, conflict detection, priority/time/duration sorting, and daily time-blocking for fixed and flexible tasks.
- Built 81 pytest tests with reusable conftest.py fixtures to test and catch failures. Improved schedule usability through color-coded priority badges, completion feedback, recurring-task indicators, and conflict warnings, helping owners identify urgent or overlapping pet-care responsibilities more quickly.

Windows 2005 | React, TypeScript, Vite, CSS, AWS | (Personal project)

July 2026

- Built a Windows XP-inspired portfolio with React and TypeScript, recreating 2005-era YouTube, Facebook, and Google interfaces as personalized applications and adapting the classic Snake game into a job-search experience where players collect applications.
- Deployed the site through Amazon S3 and CloudFront with HTTPS and a custom domain; automated production builds, deployments, and cache invalidation using GitHub Actions and AWS OIDC.

Java Graph Search Engine | Java, Maven, JUnit, GitHub Actions

Mar 2026

- Built a Java directed-graph system that parses DOT files, manages nodes and edges, exports graphs to DOT/PNG formats using Graphviz, and executes BFS, DFS, and random walk through a shared search API.
- Refactored traversal logic across nine core classes using Template Method and Strategy patterns, then added 18 JUnit tests and a GitHub Actions pipeline that installed Graphviz and ran Maven builds on every push.

ADDITIONAL EXPERIENCE

Outreach + Social Media Specialist | SDFC - WEST | Arizona State University | Mar 2023 - Dec 2025

- Collaborated in a six-person marketing team to create mental and physical-wellness campaigns for ASU students, managing Instagram content for approximately 1,800 followers, producing reels that reached 2,000–3,000 views.

3rd Place, ScaleU + Principled Innovation Academy Hackathon 2026

- Defined the product direction for Evexia, a healthcare data-transparency platform, and collaborated on API requirements, feature prioritization, and system architecture.
